## MicroGaming

Microgaming is like no other online multiplayer poker - it is a poker network, bringing together players from all over the globe, in a multitude of card rooms, to play against each other at one of the many tables always open. Microgaming's Poker Network brings you the most popular, feature-packed games - play for fun or play for real money.

### Microgaming Poker Network Satellites

The Prima Poker Network is an online gaming software network which is responsible for creating a multitude of different online poker rooms. The Prima Poker software has been powered by Microgaming software, which is a leading force when it comes to online interactive gaming systems, and has been ever since 1994. Microgaming is one of the most trusted of all names in the online gaming world, and continues even today to set the standard for fair play, responsible gaming and transparency initiatives as well.

The Prima Poker gaming network offers a whole host of advanced features which are designed specifically to offer a powerful toolset for analyzing each individual game and hand, and for beating your opponents in the end.

- Statistics are tracked on your computer on a local level, which will allow you to analyze and refine your game.
- Prima Poker allows players the chance to track their pot as well as the number of players at every stage of a particular hand. This information is extremely useful when making action decisions as the round progresses. Being able to see how many players remained after the flop, the turn or the river is a great way to analyze what hands are on the table. This is a tool which is only provided by Prima Poker for Prima Poker casinos.
- Players are also able to track the game's flow, as Prima Poker allows them to see what moves players have made up to a particular point, including folds, bets, raises and calls, as well as showing which players are still capable of acting. This tool can be extremely valuable when a player is making an action decision, because this tool allows them to see what potential there is for action. This is a tool which is only provided by Prima Poker for Prima Poker casinos.
- Prima Poker also offers Play Check, which is instant replay technology, allowing for players who are wagering real cash to review and check all of their activity and game play. This is a web based utility which is accessible through the poker software, allowing players to receive a detailed statement of every wager they ever made. The statement is like a bank-statement in that it is comprehensive and well organized, and is searchable by many different factors including date, time, amount of wager and so on.
- Prima Poker also offers Cash Check, which is a web-based tool allowing customers who are wagering real cash to view all of the financial transactions that they have made, simply by clicking on a small icon from within the Poker software. Customers can review the full details of all of their payouts and purchases in a statement which resembles a bank statement, and this information can be viewed directly from within whatever card room they are playing in. The features offered by Prima Poker online gaming software are innovative and in many cases completely unique to the Prima Poker gaming rooms, making Prima gaming rooms stand out from all of the rest.
